

# Stuart Meeson - Orchids for the home and garden

RHS Chatsworth Flower Show 2017

Floral Marquee 380

An exhibit of orchids that can be grown in and around the home without the use of a dedicated glasshouse.

Cultural methods for some of the plants presented have been adapted to suit a more domestic environment. Examples include terrestrial *Epipactis* orchids that are growing in a hanging basket and container rather than in the ground. This allows the growing medium to be optimised to promote growth and flowering. Similarly some of the orchids are presented growing in glass globes or terrariums to increase the local humidity to encourage healthy growth and flowering.
